Easy Alignment with Tilt and Rotate Top

Rubber Seal Ensures Complete Water Tightness

Manufactured in Ireland from Highest Quality PVC

Advanced Flow Characteristics

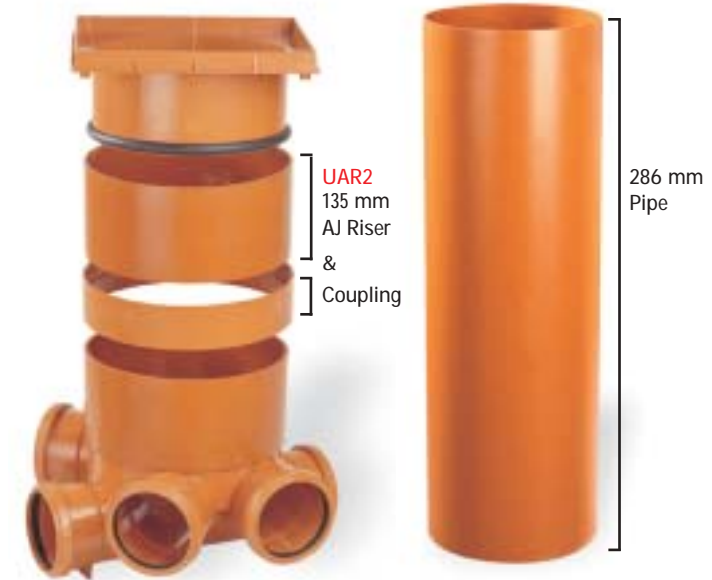

UNBEATABLE HEIGHT ADJUSTMENT OF 100mm  
No riser required for most jobs

A deeper base and longer top mean the MFP's new generation AJ now has a maximum height adjustment of 100mm. Because the improved two-piece telescopic AJ now covers almost any site situation, you won't need to spend so much time and effort cutting risers to reach the required height. The tilt and rotate feature of the MFP AJ has also been improved - the lid can now tilt to a gradient of 1:6 - which means it can be aligned with uneven paving, as well as rotated to fit the angles of buildings or footpaths.

Should you require additional height, the 135mm MFP AJ riser and coupling are designed to fit into any MFP AJ base. For those jobs where even greater height is needed, a riser of the required size can be cut from a length of 286mm pipe (see examples, right).

Manufactured in Ireland from highest quality PVC, MFP's new generation AJs are tough and durable, with advanced flow outlets and inlets designed to minimise the risk of drainage system blockage.

Despite all these added qualities and extra benefits, the MFP AJ still costs less than its nearest competitor - so next time you're looking for the widest, most advanced range of AJs in the country, just ask for MFP.

UAR2: 135mm AJ Riser & Coupling

286mm Pipe Provides Extra Risers

**MFP AJS FULLY CONFORM WITH ALL TECHNICAL REQUIREMENTS OF BUILDING REGULATIONS.**

Comprehensive Range

Offer the widest range of Access Junctions available in the country - MFP can supply you with a unit to fit almost any configuration of piping within your drainage system.
